

AMENDMENTS TO THE SPECIFICATION

In the Specification:

I. Objection to Specification

The specification is objected to as failing to provide proper antecedent basis for the claimed subject matter. To address this concern, please insert the following paragraph immediately prior to the last paragraph of the Specification:

Computer-readable media as construed herein includes removable/nonremovable, volatile/nonvolatile computer storage media. Volatile computer-readable storage media includes random access memory (RAM), which acts as external cache memory. By way of illustration and not limitation, RAM is available in many forms such as synchronous RAM (SRAM), dynamic RAM (DRAM), synchronous DRAM (SDRAM), double data rate SDRAM (DDR SDRAM), enhanced SDRAM (ESDRAM), Synchlink DRAM (SLDRAM), and direct Rambus RAM (DRRAM). Nonvolatile computer-readable storage media includes, but is not limited to, devices like a magnetic disk drive, floppy disk drive, tape drive, Jaz drive, Zip drive, LS-100 drive, flash memory card, or memory stick. In addition, nonvolatile computer storage media can include storage media separately or in combination with other storage media including, but not limited to, an optical disk drive such as a compact disk ROM device (CD-ROM), CD recordable drive (CD-R Drive), CD rewritable drive (CD-RW Drive) or a digital versatile disk ROM drive (DVD-ROM).

This paragraph provides the requested clear description of “computer readable medium.” It should be evident from the description that what is described are indeed exemplary physical structures that provide functional descriptive material in a usable form to permit the functionality to be realized with the computer. As such, it is respectfully requested that this objection be withdrawn.
